Introduction

Prérequis nécessaires à l'installation de Proxmox

Pour installer Proxmox sur une machine physique il nous faudra un écran, un clavier et une souris.

Niveau matériel il est indispensable d'avoir un processeur qui supporte la virtualisation avec un minimum de 2 cœurs, 4 Go de RAM ainsi qu'un SSD système et dédié pour les machines virtuelles et enfin une interface réseau.

Il sera nécessaire d'avoir une clé bootable contenant une ISO Proxmox que l'on configurera avec Rufus par exemple.

Installation de Proxmox

L'objectif est de venir positionner notre clé USB sur la ligne "1st Boot Device".
